

HENRY I. MILLER

Research Fellow

Expertise: Biotechnology; genetic engineering; bioterrorism; government regulation of science and technology, especially pharmaceutical development and biotechnology; regulatory reform

Henry Miller has been a Hoover fellow since 1994, prior to which he held a number of posts in the Food and Drug Administration, including founding director of the FDA's Office of Biotechnology. The holder of M.D. and M.Sc. (molecular biology) degrees from the University of California, San Diego, his research focuses on the relationship between science and regulation, the costs and benefits of government regulation, models for regulatory reform, and federal and international oversight of biotechnology. His most recent book is *To America's Health: A Proposal to Reform the Food and Drug Administration* (2000), and he publishes widely in popular and scholarly journals. He serves on several editorial boards and is a director of Consumer Alert and the American Council on Science and Health.
